- 1. Open Circuit Inductance (OCL) Test Parameters: 100kHz, 0.1Vrms, 0.0Adc, +25°C
- 2. Full Load Inductance (FLL) Test Parameters: 100kHz, 0.1Vrms, I_{sat}1, +25°C
- 3. I_{ms}: DC current for an approximate temperature rise of 40°C withhout core loss. Derating is necessary for AC currents. PCB layout, trace thickness and width, air-flow, and proximity of other heat generating components will affect the temperature rise. It is recommended that the temperature of the part not exceed 125°C under worst case operating conditions verified in the end application.
- 4. I_{sat}1: Peak current for approximately 20% rolloff @ +25°C
- 5. I_{sat}2: Peak current for approximately 20% rolloff @ +85°C
- 6. I_{sat}2: Peak current for approximately 20% rolloff @ +125°C

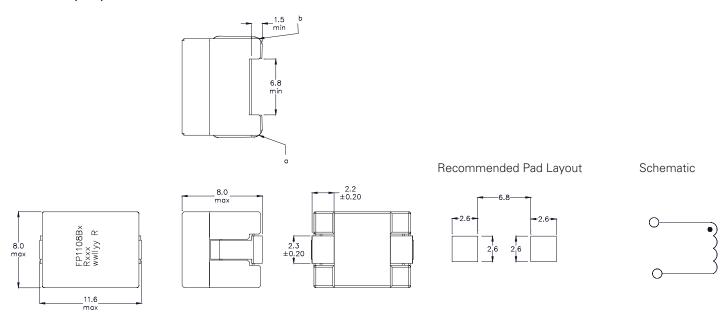

- K-factor: Used to determine B_{pp} for core loss (see graph).
 B_{pp} = K * L * ΔI * 10³. B_{pp} (Gauss), K: (K-factor from table),
 L: (Inductance in nH), ΔI (Peak-to-peak ripple current in Amps).
